Sauroposeidon Proteles A New Sauropod

Sauroposeidon (/ˌsɔːroʊpoʊˈsaɪdən/ SOR-o-po-SY-dən; meaning " lizard earthquake god ", after the Greek god Poseidon) is a genus of sauropod dinosaur known from several incomplete specimens including a bone bed and fossilized trackways that have been found in the American states of Oklahoma, Wyoming, and Texas .

Sauroposeidon - Wikipedia

The fossils were discovered in an early Cretaceous period rock layer, a time-span in which sauropods were thought to have greatly decreased in both size and number, making Sauroposeidon the one of the last great sauropod of the North American continent. When the fossils were discovered in 1993 in Atoka County in Oklahoma, their size and time of origin caused them to be misclassified as petrified tree trunks, until 1999, when a further study revealed the truth.
