Solution to Problem
1.16. In this problem,
there is a tendency to
reason that since the
opposite face is either
heads or tails, the
desired probability is
 $1/2$. This is, however,

Access Free Solution Rohatgi Probability

wrong, because given that heads came up, it is more likely that the two-headed coin was chosen. The correct reasoning is to calculate the conditional probability

played in the i th turn.
Then, you will win the tournament if you win against the 2nd player (probability p_2) and also you win against at least one of the two other players [probability $p_1 + (1 - p_1)p_3 = p_1 + p_3 - p_1p_3$]. Thus, the probability of winning the ...

presenting the fundamentals and foundations of probability.

An Introduction to Probability and Statistics - Vijay K ...

If the candidate chooses b (which happens with probability $1/3$), then the quizmaster can only open door c .

Hence $P((b;c)) = 1/3$.

Similarly, $P((c;b)) =$

$1/3$. Clearly, $P((b;b)) =$

Access Free Solution Rohatgi Probability

$P((c;c)) = 0.214b$ If the candidate chooses a then she or he wins; hence the corresponding event is $f(a;a);(a;b);(a;c)g$, and its probability is $1/3$.
